Title

Norm Violations Schools

Description

We aim to study punishing and network position in a school in Spain.

Data collection

It's complicated. We have already collected some data but explain in Question 8 why readers may consider this a valid pre-registration nevertheless.

Hypothesis

We preregister two sets of hypotheses.

We expect that:

- Popular people (in terms of in-degree) are likelier to punish norm violations (H1a)
- Popular people (in terms of in-degree) are more discriminating (in group vs out group) in punishing such that they punish out group more than in group (H1b).

We also expect that:

- High betweenness centrality people are less likely to punish norm violations (H2a).
- High betweenness centrality people are more discriminating (in group vs out group) in punishing (H2b).

We do not have any a priori expectations of variation by scenario.

Dependent variable

The dependent variable will be likelihood of punishing.

Conditions

Participants are assigned to one of two treatment groups: (1) the norm violator is an outgroup member (not a

friend)

(2) the norm violator is an ingroup member (a friend)

The manipulation varies by scenario such that subjects are assigned to one of the two treatments every time they face a new scenario.

Analyses

We will use linear regressions

Outliers and Exclusions

We will only exclude observations when the relevant responses are missing. We do not expect to exclude outlier.

Sample Size

We will collect as many observations as possible and will not conduct any analyses until the data collection has definitively finished. We anticipate collecting a minimum of 350 observations and a maximum of 410.

Other

We are in the process of collecting data but have not examined the data at all.

Name

Norm Punishing in Schools

We aim to understand how peer punishing in schools, group gossip, ostracism etc. is related to one's position in the school network. We aim to do this for punishing in general and when the norm violator is an in-group (friends) and an out-group (non-friends) member.
